INTRODUCTION

The University of Minnesota and the Mankato Area Vocational-Technical School, in cooperation with the Vocational Division, Minnesota Department of Education, operate and maintain the Vocational Agriculture Farm Management Program in the Mankato area of Southern Minnesota. This program was initiated in 1955 and is available to farmers who are enrolled in Vocational Agriculture, Adult and Young Farmer classes in the Public Schools. The area served by the Mankato analysis center is indicated on the map inside the back cover.

The purpose of the Program as far as the area school is concerned is:
(1) to give assistance to the instructors in the mechanics of keeping farm records, (2) to aid in the analysis of the farm business through the use of records as a basis for vocational guidance. Enrollment is on a voluntary basis insofar as the number of schools participating and the number of farmers enrolled in the program.

The analysis of the records and the preparation of the reports for the Mankato Area are done under the direction of Delbert Hodgkins, Vocational Agriculture Program Coordinator at the Mankato School. Clerical assistants for this project were Mrs. Julie Wildasin and Mrs. Arlene Martin.

The Farm Management Program is supervised locally by William J. Nigg, Superintendent of Schools, and F. G. Kalin, Director of Vocational and Adult Education at Mankato.

Cooperating Agencies are represented by G. R. Cochran and S. K. Wick of the State Department of Education, and Dr. Milo J. Peterson of the University of Minnesota Department of Agricultural Education. Dr. T. R. Nodland of the University Agricultural Economics Department has been available as a consultant.

Each farmer pays an annual fee which covers a portion of the cost of the record analysis. This fee covers the clerical costs of the analysis and the cost of publishing the report.

We are indebted to Truman Nodland for his assistance and advice in setting up this program and for many years of service rendered to vocational agriculture. Dr. Nodland and his associates in the Agriculture Economics Department have been most cooperative in this and other programs.

This report deals with farmers enrolled in 17 schools in the Mankato area. The following tabulation shows the number of 1962 records submitted and the name of the instructor:

SCHOOL	NO. OF RECORDS	INSTRUCTOR
Amboy	5	Robert Potosnak
Blue Earth	2	Ramsey Johnson
Cleveland	1	Ed Tapio
Fairmont	1	J. H. Tschetter
Garden City	1	Verl Rollings

Area Class (Lake Crystal)	14	E. Freier, Consultant
-		D. Hodgkins, Coordinator
TOTAL	64 65	

The records kept included farm inventories, cash receipts and expenses, feed consumed by the various classes of livestock, family living secured from the farm, household and personal expenses and receipts, and the operator's liabilities and assets other than farm capital.

FARM INVENTORIES

The Capital investment per farm varied from \$23980 to \$254945. The average investment for all farms included in this report and for the high 20% and the low 20% in labor earnings is shown in Table 1.

FARM EARNINGS

Labor earnings is a measure of the relative financial success of a farm as compared with other farms and represents the returns above all farm expenses and a charge for the use of the farm capital.

There are two methods of computing labor earnings. Table 2 shows the earnings statement on a cash basis and Table 3 shows the earnings on an enterprise or accrual basis. The principal difference in the two statements is the method of handling the net increase or decrease in the value of farm capital. In the cash statement the net increase or decrease in farm capital is entered as one item. In the enterprise statement the net change in the inventory has been included in each enterprise in order to compute "total returns and net increases", or "total expenses and net decreases" by enterprises.

RETURNS TO CAPITAL

The return to capital and family labor represents the amount available to the operator for living expenses, payment on indebtedness and savings. These figures are found in Table 4 and Table 6.

TABLE 1 - SUMMARY OF FARM INVENTORIES - 1962

FAMILY LIVING FROM THE FARM

The family living from the farm is the estimated value of the farm produce used in the house and shelter furnished the farmer and his family by the farm. It is a part of the income of the farm and a part of the expense of operating the household even though cash transactions are not involved. The omission of the farm produce used in the home results in an incomplete record of both farm income and personal expense.

The value of the family living is shown in Table 5. The values assigned are a conservative market price on the farm. If these products had been purchased, the amount paid out would have been considerably higher.

HOUSEHOLD AND PERSONAL EXPENSES AND RECEIPTS

Household and personal accounts are important if the family is to manage its financial affairs wisely. The household and personal expenses and receipts are presented in Table 6. These farmers spent an average of \$422.58 per month for family living in addition to the food, fuel, and housing furnished by the farm.

NET WORTH

A net worth statement includes a listing of all the assets and liabilities as of a given date. The difference between the farmer's total assets and his liabilities is his net worth. A net worth statement on a tenure basis is presented in Table 7. Both the farm and personal assets and liabilities are included.

The difference between the operator's net worth at the beginning and at the end of the year shows the gain in net worth. It represents the financial progress that has been made during the year. RANGE IN EARNINGS

Every study of farm earnings shows a wide variation in earnings among farmers in a given year (Figure 1). The average labor earnings of those farmers ranking in the upper 20 percent of the range according to earnings was \$12688 and of those in the lower 20 percent was \$426. This is a range of \$12262 between the average earnings of these two groups. Some of the causes for these differences in earnings, such as weather, may be beyond the control of the individual farmer. Other factors are within his control. The more important management factors affecting earnings are as follows:

- 1. Crop Yields
- 2. Choice of Crops
- 3. Return from Livestock
- 4. Amount of Livestock

- 5. Size of Business
- 6. Work Units per Worker
- 7. Control over Expense

(These factors vary from year to year in their relative influence on earnings.) 1]

EXPLANATION OF WORK UNITS

The total "work units" for any one farm is a measure of the size of that farm business. A work unit as used in this report is the average accomplishment of a farm worker, in a ten hour day, working on crops and productive livestock at an average efficiency. The number of work units for each class of livestock and each acre of crop are presented in Table 10.

TABLE 10 - NUMBER OF WORK UNITS FOR EACH CLASS OF LIVESTOCK & EACH ACRE OF CROP

Item	No. of Work Units	Item	No. of Work Units		
Dairy cattle Other dairy cattle Beef breeding herd Feeder cattle Sheep - farm flock Sheep - feeders Hogs Hens Turkeys	10.0 per cow 3.5 per an. unit* 3.5 per an. unit* .25 per 100 lbs. 1.5 per an. unit .3 per 100 lbs2 per 100 lbs. 20.0 per 100 hens .5 per 100 lbs.	Peas, small grain Hybrid seed corn Corn, husked Corn silage Sweet corn Soybean grain Alfalfa hay Other hay & seed Grass silage Soil bank	.5 per A. 2.0 per A7 per A. 1.0 per A7 per A5 per A6 per A4 per A4 per A.		

^{*} One animal unit represents one dairy cow or bull, two other dairy cattle, 1 beef cows or bull, 1 feeder steer or heifer, 3-1/3 other beef cattle, 7 sheep, 14 lambs, 2 hogs, 5 pigs, 50 hens, or 1,100 lbs. of turkeys produced.

POWER AND MACHINERY EXPENSES

Power and machinery expense per crop acre is an indication of the economy with which capital is invested in these items. The expenses are high on farms with a small acreage. In some cases, low expenses for labor might be offset by high power and equipment costs. The farmer is interested in operating at the lowest cost for power, machinery and labor combined.

TABLE 11 - POWER AND MACHINERY EXPENSES PER CROP ACRE - 1962

Item	Your farm	Average of all farms	20% most profitable farms	20% least profitable farms
Crop acres per farm Tractor expense per crop acre Crop and general machinery	\$	225 \$ 7.04	342 \$ 5.55	184 \$ 8.44
expense per crop acre	\$	\$ 7.41	\$ 6.18	\$ 8.49

AMOUNT OF LIVESTOCK

The farmers cooperating in this study are predominantly livestock farmers. 44% of these farmers maintained dairy cattle, 30% kept poultry, 22% raised sheep, 46% fed beef cattle, and 82% raised hogs.

TABLE 12 - AMOUNT OF LIVESTOCK - 1962

TOTAL FEED COSTS AND RETURNS FROM YOUR LIVESTOCK ENTERPRISES

The total "return over feed costs" for each class of livestock is shown in Table 13. This differs from the "return over feed" shown in the enterprise statement in that it is the total for each class of livestock instead of a return "per head", "per unit", or "per 100 pounds". These data indicate the relative importance of different classes of livestock as a source of income and as a market for feed. The total return is the same as the returns and net increases shown on page 5. The value of milk consumed by calves is included in the total returns from dairy cows and in the total feed cost for other dairy cattle. The value of milk consumed by calves is not included in the total returns or the feed cost of "all dairy" cattle. The return over feed is not a net return, but rather the amount available from the gross income, after paying the feed bill, to cover the outlay for hired labor, power, equipment, taxes, insurance, interest and veterinary bills and to provide a return for the use of family labor and capital.

TABLE 13 - TOTAL FEED COS	TS AND RETURNS I	ROM YOUR LI	VESTOCK ENTERPRIS	SES - 1962

Total return over feed	\$	\$	\$	\$
•				

Feed is the largest single item of cost for all classes of livestock. However, the proportion of the total cost represented by feed varies considerably between classes of livestock. Feed makes up approximately 45 percent of the total costs of maintaining dairy cattle and poultry; 50 percent in the case of a farm flock of sheep; and 75 to 90 percent for hogs, feeder cattle and feeder lambs. Consequently, it is necessary to secure a relatively higher return over feed from dairy cattle and poultry than from the other livestock enterprises in order to be able to cover all the costs other than food.

HOGS

Raising hogs is a major enterprise on most farms in Southern Minnesota. Eighty-two percent of the farms in this study raised hogs for market. Table 14 below summarizes the results of the hog enterprise analysis.

TABLE 14 - FEED COSTS AND RETURNS FROM HOGS - 1962 Average of 20% of farms 20% of farms 37 farms highest in lowest in Items raising Your returns returns farm hogs above feed above feed Feed per cwt. hogs produced. lbs.: Corn 347.6 288.6 431.4 Small grain 25.3 31.6 17.5 Commercial feeds 61.2 54.5 58.8 Total concentrates* 434.1 374.7 507.7 Alfalfa hay 6.2 7.0 3.7 Feed cost per cwt. hogs produced: Concentrates \$ 10.69 8,93 \$ 12.18 Pasture .01 Alfalfa hay .05 .06 .03 TOTAL FEED COST \$ 10.75 Net increase in value per cwt. hogs produced \$ 16.06 \$ 16.71 \$ 14.53 RETURNS ABOVE FEED COST PER CWT. DAIRY CATTLE

The quantity of feed consumed, value of feeds and returns from dairy cattle are presented in Tables 15, 16 and 17. Some of the important factors that affected the return over feed were:

- 1. Rate of production (pounds of milk and butterfat per cow)
- 2. Price received for butterfat
- 3. Feeding efficiency
- 4. Quality of ration
- 5. Economy of ration (feed cost per pound butterfat)

DAIRY CATTLE SUPPLEMENT

To provide some supplementary information for those farmers and others who wish to use it, the following tables present the summary of dairy herds on the basis of RETURN OVER FEED COST, rather than butterfat per cow.

TABLE 15B- FEED COST AND RETURNS FROM DAIRY COWS - 1962 20% of farms 20% of farms highest in lowest in Average return over return over Items Your of 18 feed cost feed cost farm farms per cow per cow Pounds of butterfat per cow 363.1 400.6 326.8 Pounds of milk per cow 10292.4 11486.0 9432.4 Percent of butterfat in milk 3.5 3.5 3.5 Price received per pound butterfat sold 93¢ 940 93¢ Price received per cwt. milk sold \$ 3.27 \$ 3.27 \$ 3.23 Feed per cow, lbs.: Corn 3050.9 2846.7 3844.0 Small grain 440.1 379.2 736.5 Commercial feed 462.4 479.6 462.8 Total concentrates* 3953.4 3705.5 5043.3 Legume hay 6588.4 6374.8 6367.6 Other hay and fodder 178.8 378.2 Total dry roughages 6767.2 6374.8 6745.8 Silage 6990.8 6724.8 8960.4 Feed cost per cow Concentrates* \$ 84.11 \$ 76.83 \$104.41 Roughages 85.43 79.78 99.90 Pasture 4,94 4.97 TOTAL FEED COSTS \$174.48 \$161.58 \$204.31 Value of produce per cow: Dairy product sales \$327.61 \$369.41 \$296.76 Dairy products used in house 5.15 4.07 4.71 Milk fed to livestock 5.21 3.28 4.44 Net increases in value of cows -7.79 1.88 -19,87 TOTAL VALUE PRODUCED \$330.18 \$378.64 \$286.04 RETURNS ABOVE FEED COST PER COW \$155.70 \$217.06 \$ 81.73 RETURNS FOR \$100 OF FEED \$193.00 \$235.00 \$141.00 Feed cost per lb. butterfat 49¢ 40¢ 63¢ Feed cost per cwt. milk produced 1.72 1.42 2,18 Number of cows

Thirty percent of the farmers cooperating in this analysis kept some chickens. In most cases poultry is a so-called minor enterprise, providing eggs and poultry meat for family consumption plus an additional amount of cash income.

Some of the important factors that affected the return over feed were:

- 1. Quantity of feed required per hen
- 2. Price received per dozen eggs sold
- 3. Eggs laid per hen
- 4. Percentage of death loss of hen

Turkeys are produced on many farms in the Mankato area. Not enough suitable records were available, however, to calculate averages for this enterprise.

Unpaid Family Board Furnishe Hired Lab	d	Whole Milk Whole Milk used in home	\$3.00 per cwt. .10 per qt.	

LABOR EARNINGS CORRELATED WITH EXCELLED FACTORS

Studies of earnings of farmers in this area show that there are seven major management factors causing variations in earnings among farmers within a given year. These seven factors are (1) crop yields, (2) choice of crops, (3) returns from livestock, (4) amount of livestock, (5) size of business, (6) work accomplishments per worker, and (7) control over expenses. The combined or cumulative influence of these seven management factors on earnings is shown in Table 26. The farmer's earnings are determined to a considerable extent by his accomplishments in these seven factors.

TABLE 26

No. of factors in which farmers excelled	No. of farms	Average labor earnings \$2000 \$5000 %8000	
0 or 1	6	<u>XXXXXXXXXXX</u> \$29	95
2 or 3	23	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	90
4 or 5	14	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	91
6 or 7	7	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	95

Table 26 indicates that it will be worth while for each co-operator to study carefully his ranking on pages 11 and 12, and learn his standing in respect to each of the above factors and the elements of strength and weakness in his farm business.
