

1988 Annual Report Southwestern Minnesota March, 1989

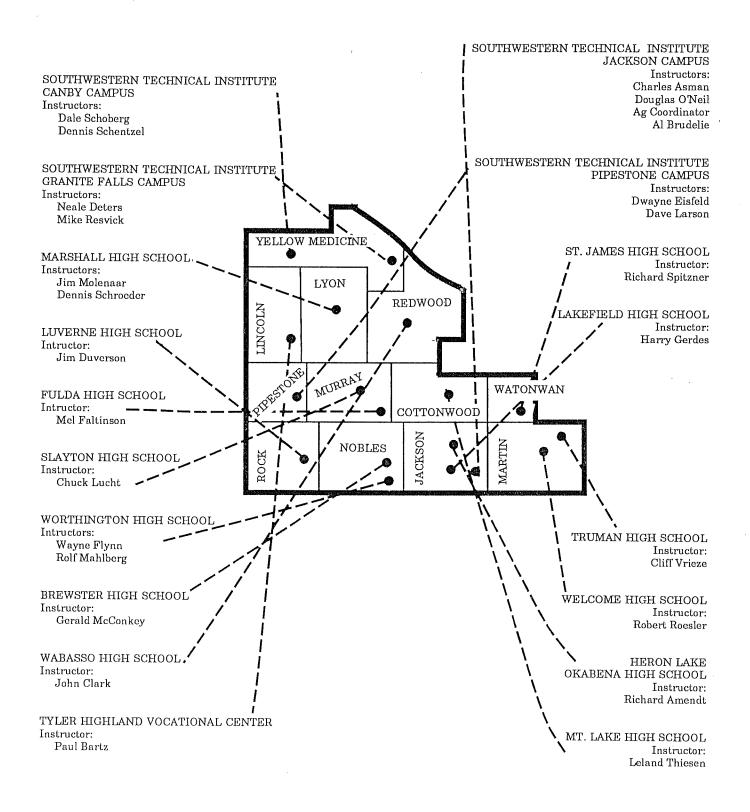

AN ADULT EDUCATIONAL PROGRAM

In cooperation with: State Board of Vocational Technical Education
Division of Agricultural Education — University of Minnesota

SOUTHWESTERN TECHNICAL INSTITUTE

SOUTHWEST MINNESOTA FARM BUSINESS MANAGEMENT PROGRAMS

Below is a listing of the schools involved and the instructors responsible for these programs.

Class Location

Brewster Canby

Fulda Heron Lake/Okabena Jackson

Granite Falls

Lakefield Luverne Marshall

Mt. Lake Pipestone

Slayton
St. James
Truman
Tyler H. V. C.
Wabasso
Welcome
Worthington

Instructor

Gerald Mc Conkey Dale Schoberg Dennis Schentzel Mel Faltinson Richard Amendt Charles Asman Douglas O'Neil Mike Resvick Neale Deters Harry Gerdes James Ouverson Dennis Schroeder James Molenaar Leland Thiesen David Larson Dwayne Eisfeld Chuck Lucht Richard Spitzner Cliff Vrieze Paul Bartz John Clark Robert Roesler Wayne Flynn Rolf Mahlberg

The analysis of the records and preparation of the report for the Southwest area is done under the direction of Al Brudelie, Area Ag Coordinator, at Southwestern Technical Institute (Jackson Campus). Directing in a supervisory capacity are Marlin Wacholz, Director, Southwestern Technical Institute; Dennis Finstad, Campus Director; John Murray, Education Specialist, State Board of Vocational Technical Education; and Dr. Edgar Persons, Chairman of the University of Minnesota Agricultural Education Division. Data processing was done by Specialized Data Systems, Inc., Madison Wisconsin. Special acknowledgments to Suzanne Lovell for her part in the preparation of this report.

EXPLANATION OF TABLE 5.2 RATIO'S

- THE CURRENT RATIO This is a measure of liquidity. It indicates the shortrun ability of the business to service debt. It demonstrates the adequacy of current assets, if liquidated, to pay off annual debts as they come due. Usually current assets have a life of 1 year or less. It is calculated by dividing current assets by current liabilities.
- INTERMEDIATE RATIO Intermediate assets and liabilities are those where the finances used are converted into product in a period usually from one to ten years. Examples may be breeding livestock, machinery and equipment. The increase in the ratio over a period of time is a favorable sign. It is calculated by dividing intermediate assets by intermediate liabilities.
- WORKING RATIO The desired trend is for this ratio to increase over time. It is also desirable for this ratio to be larger than the fixed ratio and net capital ratio. The farm business needs to have sufficient liquid assets and retain management flexibility to absorb price decreases and other factors negatively affecting current and intermediate asset values. This ratio is calculated by dividing current assets and intermediate assets by current liabilities and intermediate liabilities.
- FIXED RATIO This ratio should be in excess of one but it is also important for this ratio to be increasing over time. This ratio should not be increased at the expense of a safe working ratio. It is calculated by dividing long term assets by long term liabilities.
- 36 CAPITAL RATIO Net capital ratio is one of three measures of solvency; how much value remains if all assets are converted to cash at inventoried value and the total debt is paid. This ratio reflects the risk-bearing capacity of the farm business by showing the percentage that assets could decline and still cover liabilities. The higher the ratio number, the better the risk. A ratio of less than 1.0 = insolvent, a ratio of 1.0 = a net worth of zero. A Ratio of 2.0 is considered a safe ratio. This would allow a 50% reduction in asset value or 100% increase in liabilities before becoming insolvent. This ratio is calculated by dividing total assets by total liabilities.
- 37 <u>EQUITY/ASSET</u> This ratio shows the portion of total assets paid for and owned by the operator clear of financial claims. A ratio of .80 shows that the operator owns 80% of all total assets and a ratio of .44 shows he owns only 44% of all total assets. Therefore, this ratio should be increasing over time. It is calculated by dividing total

equity by total assets.

- DEBT/EQUITY This is another overall measure of solvency. It shows the relationship between debt and equity. A ratio of 1.00 indicates that equity and debt are equal. That would be equivalent to a net capital ratio of 2.00 to 1.00 and an asset equity/asset ratio of .50 to 1.00 All measures of solvency use the same three measures of financial position. They all express relationships between assets, liabilities and net worth (or equity). Lenders prefer a debt-equity ratio of less than 1.0. It is calculated by dividing total liabilities by total equity.
- 39 <u>CURRENT DEBT</u> The lower the current debt structure ratio is, the more liquid the business. A ratio of .10 means only one dollar (\$1.00) out of every \$10 debt must be paid within the next year. A ratio of .50 means one half of the total debt must be paid in the next year. This ratio is calculated by dividing current liabilities by total liabilities.

TABLE 10 - INDIVIDUAL CROP ENTERPRISE ANALYSIS

The individual crop analysis table shows acres, yield, value per unit, (usually the value per unit at harvest time) and gross return per acre for each crop raised by a particular farmer the last crop year.

Cost such as fertilizer, chemicals, seed, crop drying expense, special hired labor, and custom work are costs that are assigned to each individual crop in the account book or computer record system. These costs are shown in table 10 under <u>variable costs</u>.

Other costs, called <u>allocated costs</u>, are calculated from the actual costs incurred. They are allocated by formula. The power and crop machinery expense is divided into ownership and operation costs for each crop. Allocated cost calculations are assigned to each productive enterprise. Rented land cost is a reported cost from the farmer's records.

The total crop return minus the variable and allocated costs equals the return over listed costs which is line 44.

All crop enterprises produced on a farm are listed separately. This allows the operator to compare the return over listed costs for each crop produced.

Land cost on owned land is the greater of the opportunity cost or the actual cost of ownership. Land cost for rented land is based on the actual rent paid for the use of the land.

COSTS AND RETURNS FROM LIVESTOCK ENTERPRISES

Productive livestock enterprises are an important part of many farm businesses in Minnesota. Farms involved in this report may have one or more livestock enterprises. The following tables pertain to these livestock enterprises.

Since feed is the largest single item of cost for all classes of livestock, return over feed costs has been used to classify farm livestock enterprises into high, low and average groups.

Other cash costs relatively easy to identify and classify in the farm records are listed in each of the tables as other direct costs.

Allocated costs include interest charges to the enterprise, allocated charges for hired labor, utilities, power and machinery, livestock equipment and building and fence costs. These costs are allocated to each livestock enterprise by the computer using a carefully devised formula to make the proper allocations.

Each enterprise table includes supplementary management information. This information can provide clues indicating the strengths and weaknesses of each enterprise.
