Measures of Farm Organization and Management Efficiency	19
Explanation of Measures of Farm Organization & Management	20
Non Farm Income & Household Personal Expense - Table 4	21-22
Whole Farm Enterprise Statement - Table 3	23-24
Ten Year Crop Yields and Returns on Selected Crops	25-26
Explanation of Crop Tables	27
Crop Data - Individual Crop Tables	28-40
Average Prices Used - Work Unit Values - Animal Unit Values	41
Explaination of Livestock Tables	42
Ten Year Livestock Profitability	12-11
Costs & Returns from Farrow to Finish Hogs	. 45-46
Costs & Returns from Finishing Hogs	47-48
Costs & Returns from Weaning Pig Production	49-50
Costs & Returns from Hogs, Mixed Systems	51-52
Costs & Returns from Combined Hogs	53
Key Average Pork Production Efficiency Factors	54
Dairy Cows	55-56
Other Dairy Cattle Replacements	57-58
Other Dairy Cattle Replacements & Feeders	. 59-60
All Dairy Cattle & Replacements	61-62
Beef Breeding Cattle	63-64
Beef Feeders	65-66
Dairy Beef	67-68
Sheep - Farm Flock	69
Custom Work	70
Summary of Selected Items of Information 1991-1995	70
Money Spent by the Average Farmer in S.E. Minnesota	71-72
money spent by the Average Parmer in S.E. Milliesola	/3

The analysis of the records and preparation of the report for the Southeast area is done under the direction of Vic Richardson, Regional Dean of Management Education, at the Riverland Technical College - Austin. Directing in a supervisory capacity are Don Olson, Interim President of MN Riverland Technical College; John Gedker, Campus Vice President, MRTC; John Murray, Program Manager, MN State Colleges and Universities; and Dr. Edgar Persons, Head of the University of Minnesota Agricultural Education Division. Data processing was done by Specialized Data System, Inc., Madison Wisconsin. Special acknowledgement is due the Graphic Technology Department at the Riverland Technical College, Austin Campus, for printing this report and Joan O'Rourke and Carrie Allen for typing it.

C R O P D

LIVESTOC

Farm Business Management education has been a part of agriculture education programs in Minnesota since 1952. From the early cooperative efforts of the State Department of Education and the Department of Agriculture Education (University of Minnesota), the program has expanded to serve over 6000 farm families each year in six farm management regions. Programs are now administered and managed by the Minnesota State Colleges and Universities through the Technical Colleges.

The Farm Business Management Program is an educational program that is designed to help farm families achieve their farm business and family goals. This is done through improved management organization and efficiency of their farm operations. This purpose has not changed over the years.

To accomplish these purposes, programs have been organized to conform to the following guidelines:

- 1. Farm families enroll in a specific management course.
- 2. Each course has a specific objective and units of instruction to meet the objective.
- 3. Courses are offered in sequence and farmers are expected to enroll in the first of the sequence of courses.
- 4. There is continuity to each course. Each leads to the next course in the sequence.
- 5. Instruction occurs both in the classroom and on the farm with the farm family.

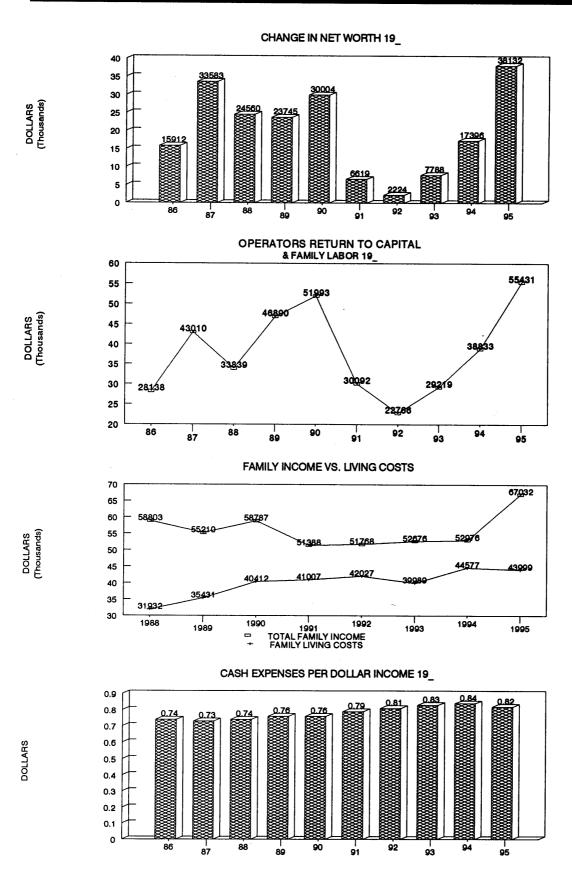

Programs organize their curriculum around the same central theme. They are:

- Level 1 Introduction to Farm System Management
- Level 2 Farm System Analysis and Evaluation
- Level 3 Interpreting and Modifying Farm System Management Plans
- Level 4 Farm System Trends and Projections
- Level 5 Integrating Current Information into Farm System Plans
- Level 6 Examining the Context of Farm System Management Plans

The programs became course/credit based in FY92. Each individual enrollee completes a needs assessment with the instructor, after which the enrollee registers for classes and course work to meet these needs. A typical farm business enrollee registers for 15 credits per year. The purpose of this effort is to more adequately address the needs of the individual farmer, making enrollment even more beneficial.

Like most educational programs, members benefit from the instruction in relation to how much effort they put into study. Some farmers have benefitted more, and some less, depending upon how seriously they studied the results of their business analysis and the kind of decisions they made as a result of their analysis.

The farm business and enterprise analysis format allocates all specific and general farm expenses to each farm enterprise. A set of tables, the Table 200 series, has been integrated to provide a more uniform Profit & Loss format which separates cash and accrual transactions, and easier to understand measures of Profitability, Liquidity and Solvency. The allocation of all costs and the introduction of the new tables makes the analysis a useful report to be used for long range planning, short term cash purchase planning and cash flow projections.

The four graphs above show us what happened to agriculture in SE Minnesota in the last ten years.

<u>TABLE 200</u> is a Cash Statement of Operator's Farm Profit and Loss. It provides a detailed picture of cash income and expenditures, as well as grouping them into categories. It shows the Net Cash Income for the farm operation.

<u>TABLE 210</u> provides the Accrual Statement of Operator's Farm Profit or Loss. The Net Cash Income from Table 200 is adjusted for the change in inventory value of current assets such as grain and market livestock to determine the Net Operating Income.

Depreciation and Capital Adjustments of intermediate and long term assets such as Breeding Livestock, Machinery, Buildings and Land, and other adjustments for changes in Accounts Payable and Delinquencies are then added or subtracted to determine the Net Farm Profit or Loss.

TABLE 220 reports various Measures of Farm Profitability, Liquidity, and Solvency.

Profitability is reported as:

- 1) Net Return to Capital, Family Labor & Management
- 2) Net Return to Operator's Labor & Management
- 3) Net Return to Labor & Management (fulltime equivalent)
- 4) Return to Farm Capital
- 5) Return to Operator Equity

Liquidity is calculated on both the cash and accrual basis as the amount available to service Non Real Estate Debt and the years required to turnover Non Real Estate Debt, both determined after paying family living expenses and servicing real estate debt.

Solvency is shown as Operator Equity as well as the percent in debt by category, at both the beginning and end of the record year.

<u>TABLE 230</u> shows various measures of farm size, ie; acres, units of work accomplished, number of workers on the farm, and operator investment. This table also provides a brief summary of crop and livestock production and cost for the year.

<u>TABLE 250</u> shows the Operator's Financial Position and Net Worth by providing a categorical listing of operator's assets (both book value and market value), liabilities, and equity (book and market).

TABLE 260 contains the Supplemental Financial Information based on recommendations of the American Bankers Association Financial Standards Task Force.

NOTE: The Accuracy/Reliability Check on the previous (facing) page shows the accuracy of the farm record in reporting cash, liabilities and net worth.

^{*}No cropping operations included in ratios for swine, commercial feedlot, and dairy enterprises. All figures are expressed as dollars/cents of annual sales per dollar of assets.

NOTE: All assets are at market value. Ratios are those judged to be reasonably acceptable by several financial consultants.

EXPLANATION OF FINANCIAL MEASURES OF POSITION AND PERFORMANCE RATIOS

CURRENT RATIO (current assets divided by current farm liabilities) indicates the extent to which current farm assets, if liquidated would cover current farm liabilities. The higher the ratio, the greater the liquidity.

WORKING CAPITAL (current farm assets minus current farm liabilities) is a theoretical measure of the amount of funds available to purchase inputs and inventory items after the sale of current farm assets and payment of all current farm liabilities. Adequacy must be related to farm business size.

DEBT/ASSET RATIO (total farm liabilities divided by total farm assets) expresses what proportion of total farm assets is owned to creditors. The higher the ratio, the more risk exposure of the business.

EQUITY/ASSET RATIO (total farm equity divided by total farm assets) measures the proportion of total farm assets financed by the owner's equity capital. It represents the owner's claims against business assets. The higher the ratio, the more total capital supplied by the owner and less by the creditors.

DEBT/EQUITY RATIO (total farm liabilities divided by total farm equity) reflects the extent to which farm debt capital is being combined with farm equity capital. The higher the ratio, the more total capital supplied by the creditors and the less by the owner.

RATE OF RETURN ON FARM ASSETS ([net farm income from operations + farm interest expense - value of operator & unpaid family labor & management] divided by average total farm assets) measure the rate of return on farm assets -- an overall index of profitability. the higher the value, the more profitable the farming operation.

RATE OF RETURN ON FARM EQUITY ([net farm income from operations - value of operator & unpaid family labor & management] divided by average total farm equity) measures the rate of return on equity capital used in the farm business. The higher the ratio, the more profitable the farming operation.

OPERATING PROFIT MARGIN RATIO ([net farm income from operations + farm interest expense - value of operator & unpaid family labor & management] divided by gross revenues) measures financial efficiency in terms of return per dollar of gross revenue. The higher the ratio, the more efficiency.

NET FARM INCOME ([farm revenues - farm expenses] + the gain or loss on the sale of farm capital assets) represents the return to the farm operator for unpaid labor, management, and owner's equity.

TERM DEBT AND CAPITAL LEASE COVERAGE RATIO ([net farm income from operations + total non farm income + depreciation expense + interest on term debt + interest on capital leases - income tax expense - withdrawals for family living] divided by [annual scheduled interest & principal payments on term debt + annual scheduled interest & principal payments on capital leases]) measures the ability of the borrower to cover all term debt and capital lease payments. The greater the ratio, over 1:1, the greater the margin to cover the payments.

CAPITAL REPLACEMENT AND TERM DEBT REPAYMENT MARGIN (net farm income from operations + total non farm income + depreciation expense - income tax expense - withdrawals for family living - payments on old operating debt - principal payments on current term debt - principal payments on current capital leases - total payments on personal liabilities) evaluates the ability of the farmer to generate funds necessary to repay term debt with maturities over one year and replace capital assets.

ASSET TURNOVER RATE (gross revenues divided by average total farm assets) measures how efficiently farm assets are being used to generate revenue. The higher the ratio, the greater efficiency.

OPERATIONAL RATIOS reflect the relationship of expense and income to gross revenues. The sum of the first three expresses total farm expenses per dollar of gross revenue.

OPERATING EXPENSE RATIO([total operating expenses - depreciation expense] divided by gross revenues). The lower the ratio, the more efficient the business.

DEPRECIATION EXPENSE RATIO (depreciation expense divided by gross revenues). The lower the ratio, the more efficient the business.

INTEREST EXPENSE RATIO (total farm interest expense divided by gross revenues). The lower the ratio, the more efficient the business.

NET FARM INCOME FROM OPERATIONS RATIO (net farm income from operations divided by gross revenues). The higher the ratio, the more efficient the business.

<u>CURRENT RATIO</u> (current assets divided by liabilities) is a measure of liquidity that indicates the shortrun ability of the business to service debt. It demonstrates the adequacy of current assets, if liquidated, to pay off annual debts as they come due. Current assets typically have a life of one year of less.

<u>INTERMEDIATE RATIO</u> (intermediate assets divided by intermediate liabilities). Intermediate assets and liabilities are those where the finances used are converted into product over a period of from one to ten years. Examples may be breeding stock, machinery and equipment. An increase in the ratio over a period of time is a favorable sign.

<u>WORKING DEBT RATIO</u> (current and intermediate assets divided by current and intermediate liabilities). It is desirable for this ratio to increase over time. It is also desirable for this ratio to be higher than the fixed ratio and the net capital ratio. The farm business needs to have sufficient liquid assets and management flexibility to absorb price decreases and other factors negatively affecting current and intermediate asset values.

<u>FIXED DEBT RATIO</u> (long term assets divided by long term liabilities). This ratio should be in excess of 1.00, and should be increasing over time. However, this ratio should not be increased at the expense of a safe working ratio.

NET CAPITAL RATIO (total assets divided by total liabilities). This ratio is one of three measures of solvency; how much value remains if all assets are converted to cash at inventoried value and the total debt is paid. This ratio reflects the risk-bearing capacity of the farm business by showing the percentage that assets could decline in value and still cover liabilities. The higher the ratio number, the better the risk. A ratio of less than 1.00 =

EQUITY/ASSET RATIO (total equity divided by total assets) shows the portion of total assets paid for and owned by the operator clear of financial claims. A ratio of 0.80 shows that the operator owns 80% of all assets and a ratio of 0.44 shows he owns only 44% of total assets. This ratio should be increasing over time.

<u>DEBT/EQUITY RATIO</u> (total liabilities divided by total equity) is another measure of solvency, showing the relationship between debt and equity. A ratio of 1.00 indicates that equity and debt are equal. That would be equivalent to a Net Capital Ratio of 2:1, or an Equity/Asset Ratio of 0.5:1. All measures of solvency use the same three measures of financial position to express relationships between assets, liabilities and net worth (or equity). Lenders prefer a debt-equity ratio of less than 1.00.

<u>DEBT STRUCTURE RATIO</u> (current liabilities divided by total liabilities). The lower the current debt structure ratio, the more liquid the business. A ratio of 0.10 means that only \$1.00 of every \$10.00 of total debt must be paid within the next year. A ratio of 0.50 means that one-half of the total debt is due within the next year.

The following explanations and definitions are for use in interpreting Table 8.

- 1. <u>RETURN TO LABOR & MANAGEMENT</u> A measure of the relative financial return for the operators labor, taking into account all income and expense, cash and non-cash, including a charge for the use of farm capital. This is based on the Operators share of the business and is found also in Table 220.
- 2. <u>CROP YIELD INDEX</u> A measure of the crop yield level for all crops produced expressed as a percentage of the average; the average being 100%.
- 3. <u>RETURN OVER ALL LISTED COST PER TILLABLE ACRE</u> (Excluding pasture) This is the net return per tillable crop acre after all variable and allocated costs have been paid.
- 4. <u>GROSS RETURN PER TILLABLE ACRE</u> An additional measure of crop selection based on total production times an average price for the crops, plus other crop income such as insurance proceeds and disaster program payments.
- 5. <u>INDEX OF RETURN PER \$100 FEED FED TO PRODUCTIVE LIVESTOCK</u> Measures the general level of efficiency for all livestock. It is expressed as a percentage of the average and combines the individual livestock indexes into one figure.
- 6. <u>LIVESTOCK UNITS PER 100 ACRES</u> A measure of livestock density or population on the farm. Unit values are assigned to the various classes of livestock. Unit values are found in Table 7 on page 41.
- 7. <u>SIZE OF BUSINESS WORK UNITS</u> A measure of the total work being accomplished. A unit of work is a standardized measure of accomplishment allowing comparison between diverse farm operations with various enterprises. Work Unit values assigned to each class of livestock, each crop, and to other tasks utilizing farm labor are listed in Table 7 on page 41.
- 8. <u>WORK UNITS PER WORKER</u> Measures labor efficiency. It is the total work units divided by the number of workers on the farm including the operator, hired labor and family labor.
- 9. POWER, MACHINERY, EQUIPMENT AND BUILDING EXPENSE PER WORK UNIT A measure of expense control. It is the total of items 31 through 36 in Table 3 divided by the number of Work Units.

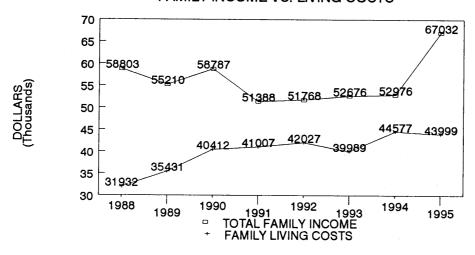

Other items listed on Table 8 are related to the above measures and serve to further define and describe the efficiency level of the farm business. Note should be taken that items listed in Table 8 are to be considered in the light of the individual farm and farm operator. Although in general, an above average level for each factor listed would indicate an above average earnings, this may not be true when individual farms are considered. The inter-relationship of factors varies from farm to farm.

The Enterprise Statement (Table 3) is a "Whole Farm" table that provides an accrued picture of each part of the farm business as an income center or as an expense center. Cash receipts and expenses are adjusted for changes in inventory and depreciation for each enterprise, in order to show net increases and net decreases for the income center or expense center.

TABLE 10 - INDIVIDUAL CROP ENTERPRISE ANALYSIS

The individual crop analysis tables show acres, yield, value per unit (at harvest time), and gross return per acre for each crop raised. All the crop enterprises produced on a farm are analyzed separately. This allows the operator to compare the costs and returns for each individual crop.

Costs such as fertilizer, crop chemicals, seed, crop drying, special hired labor and custom work are costs that are assigned to each individual crop by the farm operator. These costs are shown as variable costs.

Other costs, more difficult to assign, are called allocated costs and are calculated from the actual costs incurred. These costs are allocated by computer formula. The power and machinery expense is divided into ownership and operation costs. Allocated costs calculations are assigned to every productive enterprise on the farm.

Land cost (line 37) on owned land represents the actual land ownership cost and includes costs for interest, real estate taxes and improvement costs on the land. Land cost for rented land is the actual rent paid for the use of the land, as reported in the farm operator's records.

Costs for hired labor (line 39) and non-real estate & building interest (line 41) are actual overhead costs which were not assigned to a specific enterprise. They are allocated by formula.

The total crop return minus the variable and allocated costs equals the return over listed costs shown on line 44.

Fair rental value (line 49) is a value the operator assigns to his own land. Land opportunity cost (line 50) represents the total costs associated with owning land; real estate taxes, land improvement costs and a 7% opportunity cost on land investment (rather than actual interest paid). These costs may be greater than the actual cost reported on line 37. Both lines 49 and 50 represent opportunity costs for owned land. Although it may not be necessary to cover these costs in a particular year, they should be considered as a long term cost of investing in and owning land.

Total Cost Adjusted to a Minimum 7% Interest (line 51) represents actual productions costs plus a 7% interest cost on all inputs on a per acre basis. Total Adjusted Cost/Unit of Product (line 55) is this per acre cost from line 51 divided by actual production from line 4.

Total production cost including adjusted family living (line 54A) represents the total actual cost per unit of crop (bushel, ton, etc.) plus the adjusted cash family living expenses as reported on Table 4, line 35A. Family living costs are allocated to each enterprise by formula and represent the proportional share that each enterprise should contribute.

EXPLANATION OF WORK UNITS

The TOTAL WORK UNITS on any one farm is one measure of the size of that farm business. A Work Unit, as used in this report, is a standardized measure of productivity allowing comparison between diverse farm operations with various enterprises. Total number of Work Units is not a measure of how hard a farmer works but it does measure how much is being accomplished on the farm.

TABLE 7	WORK UNITS FOR CROPS	LIVESTOCK AND WORK	COFF OF THE FARM
LADLE /			

	NO. OF WORK		NO.OF WORK
ITEM	<u>UNITS</u>	<u>ITEM</u>	<u>UNITS/ACRE</u>
Dairy Cattle	7.0/cow	Barley, Wheat, Oats, Rye	.30/acre
Other Dairy Cattle	1.2/head	Canning Peas	.40/acre
Beef Breeding Cows	1.5/head	Oat Silage	.40/acre
Beef Feeders	.12/cwt	Canning Corn	.50/acre
Hogs - Complete	.12/cwt	Corn for Grain	.55/acre
Hogs - Finishing	.06/cwt	Soybeans	.45/acre
Hogs - Wean, Pigs	1.4/litter	Corn & Cane Silage	.60/acre
Sheep, Farm Flock	.60/head	Alfalfa Hay	.60/acre
Lambs, Feeders	.30/cwt	Other Leg. & Mix Hay	.40/acre
Chickens, Lay. Flock	5.0/100	Other Grass Hay	.30/acre
Broilers	.20/cwt	Annual Hay	.40/acre
Turkeys, Lay. Flock	25.0/100	Legume & Grass Silage	.40/acre
Turkey Poults	.12/cwt	Summer Fallow Tilled	.20/acre
Labor Off the Farm	1.0/\$80	Wild Hay	.20/acre
Set Aside Acres, Tilled	.20/acre	Tillable Grass Pasture	.05/acre
Set Aside Acres, Untilled	.05/acre	Non-tillable Pasture	.01/acre
Legume Pasture	.05/acre		

The following values are used for each type of animal in calculating total number of animal units on Table 8, Items 8 and 30.

TYPE OF ANIMAL	ANIMAL UNITS	TYPE OF ANIMAL	ANIMAL UNITS
Dairy Cows	1.0/head	Pigs	.2/head
Other Dairy (young st.)	.5/head	Sheep, Adults	.143/head
Beef Cows	.8/head	Lambs	.071/head
Other Beef (young st.)	.3/head	Chickens, Laying Hens	.02/head
Beef Feeders	1.0/head	Broil. & Turkey Poults	1.0/1100lb.
Hogs. Adults	.4/head	Turkeys, Laying Flock	.04/head

LIVESTO

COSTS AND RETURNS FROM LIVESTOCK ENTERPRISES

Productive livestock enterprises are an important part of many farm businesses in Southeast Minnesota. Farms involved in this report may have one or more livestock enterprises. The following tables pertain to these various livestock enterprises.

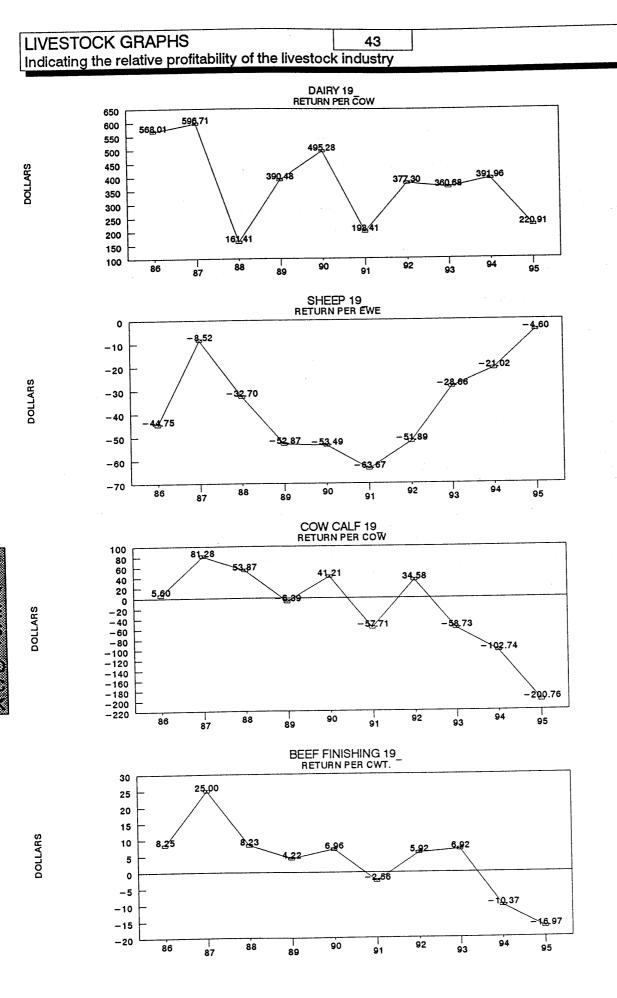

Since feed is the largest single item of cost for all classes of livestock, return over feed costs has been used to classify livestock enterprises into the high, low and average groups.

The other cash costs which are relatively easy to identify and assign in the farm records are listed in each of the tables as Other Direct Costs.

Allocated Costs include interest charges to the enterprise, allocated charges for hired labor, utilities, power and machinery, livestock equipment, and building and fence costs. These costs are allocated to each enterprise by computer using a carefully devised formula to make the proper allocations.

Each enterprise table includes Supplementary Management Information. This information can provide numerous clues indicating the strengths and weaknesses of each enterprise.

Total Cost Including Family Living (the last line) represents the total production cost per unit (CWT, Pig, Cow, etc.) associated with producing the commodity plus the adjusted family living expenses as reported on Table 4. These family living costs are allocated by formula and represent the proportional share that each enterprise should contribute.

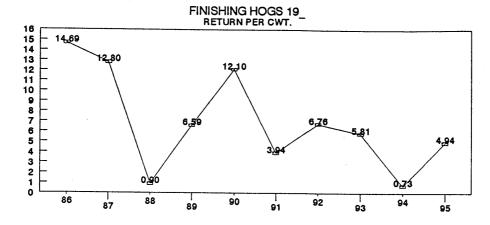

4/

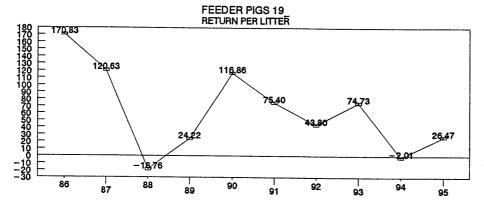

Indicating the relative profitability of the livestock industry
