A guide for CHS Hedging customers

A photograph of an industrial facility, likely a refinery or chemical plant. The image shows several large, silver-colored metal valves with blue handwheels. The valves are connected to a network of pipes. In the background, there are large white storage tanks and a clear blue sky. The overall scene is brightly lit, suggesting a sunny day.

SECTION 5 - ACCOUNT SUMMARY

Finally, a summary section condenses and translates the four proceeding main sections into all possible dollar and foreign breakdowns required to balance and value your account. Starting with the beginning balance, then net profit/loss from trades, plus commissions, fees, cash amounts and option premium resulting in the ending balance for that day. Open trade equity is added which then follows the total equity and account value at market. Initial and maintenance margin requirement are given, as well as excess equity or margin deficit. If there is foreign trading in the account, we will also show the currency conversion rate to U.S. dollars and the converted account value at market to each currency and a converted total to U.S. dollars for the account.
