## INTRODUCTION

The computerized analysis of the farm business has grown increasingly complex. As a result, it is more important than ever before that the data be recorded correctly on the information sheets submitted to the analysis center.

Getting an accurate analysis of the farm business does not start with the data forms. It begins when the first entry is made in the accounting system. Subsequent entries made correctly and verified during the record close-out process insure that the information recorded in the business analysis will be an accurate picture of the performance of the farm business.

Confidence in the accuracy of the record can be bolstered by following a good close-out procedure. This procedure should consist of the following documents:

1. A checklist for closing the account.
2. A livestock numbers check (FA12).
3. A crop and feed check.
4. A supplementary information form.
5. A cash check.

Copies of each of these close-out instruments, except the checklist for closing the account, is included on the pages which follow. A checklist should be devised for each accounting system used. It should be specific to page, line and column number so that every item essential to the completion of an accurate analysis is addressed.

INSTRUCTIONS FOR COMPLETING COMPUTER DATA FORMS FOR  
MINNESOTA VOCATIONAL AGRICULTURE FARM BUSINESS MANAGEMENT PROGRAM

The instructions which follow are for computer data Forms 1, 2 and 3, revised October 1976. The instructions are to clarify the procedures for recording data from the completed Minnesota Farm Account Book. Uniform procedures among analysis areas will permit farm records to be used in special sorts without regard to analysis area boundaries and provide a variety of teaching materials for use in high school and adult agricultural instruction.

Recorders should consider each item carefully before placing the information on the data sheet. Directions for recording quantities and values must be observed very carefully to avoid costly errors in the final analysis report. The design of the computer forms aids in direct transfer of data from the account book. Livestock numbers and feed quantities can be transferred directly from the appropriate close-out forms (i.e. livestock report, crop and feed check). Every effort has been made to eliminate the necessity for calculating quantities and value prior to entry on the computer forms.

DATA FORM IDENTIFICATION

Code Number

Each cooperator should be assigned a unique eight digit code for identification. The code number should remain the same from year to year and must be identical on all forms used in the business analysis of particular farm, including the computerized depreciation schedule. The code number consists of 8 digits with 4 sets of identifying numbers: state, area or region within the state, school within an area and individual farm identifiers.

— — —	—	— — — —	— — — — —
State	Area	School	Farmer

State Code Assignments for all states in the United States are listed on Data Form 1-A. This code number must be used as the first two digits of the record code.

Area School Code Assignments In Minnesota are as follows:

1. Austin
2. Winona
3. Mankato
4. Thief River Falls
5. Staples (6 - St. Cloud Clients)
  
6. Willmar (9 - St. Cloud Clients)
7. Jackson

Other states may devise their own scheme for assigning area codes. The code for an individual farmer should remain the same from year to year to permit easy data retrieval.

Name - Print full name.

Date - Record date the data sheet is completed. Some may prefer to use the date the sheets are submitted to the Computer Center.

School - School in which cooperator is enrolled in farm business management education.

City - City address of school.

State - Minnesota (to differentiate from Washington, Wisconsin, Iowa and others who use the same program for record analysis).

The information described above should be clearly written on each data form. Forms may be separated at the Computer Center before being key punched and later reassembled. Failure to record the identification information may result in lost data. When properly completed, the identification information will appear as follows:

CODE 23103213 NAME JOHN DOE  
AREA CENTER West SCHOOL Blinkum  
DATE 1-10-77 CITY NOD STATE MN

## DATA FORM 1A, 1B, 1C, 1D, 1E

The new vertical arrangement of the data sheets require specific instructions for each enterprise. This manual contains only one livestock enterprise per form for purposes of defining the procedures for completing the data entry. Up to three enterprises can be recorded on each form. If one-three enterprises are to be reported, all should be reported on form 1A. Use form 1B for enterprises 4, 5 and 6. If more than six livestock enterprises are to be reported, use form 1C. In the unlikely event that the farm has more than nine enterprises, report the next three on an additional set of forms 1C by relabeling the form 1D. It is possible to report up to fifteen livestock enterprises per farm by relabeling the Form 1C forms to accomodate the additional enterprises.

There is a separate facsimile of the data sheet for each livestock enterprise table format. To determine how the data sheet should be completed for any enterprise, look up the enterprise code number and description in the Master Enterprise List, Crops and Livestock. This description will list the table format used to report the enterprise information. You can then locate the appropriate facsimile page in this document.

Each facsimile page is completed in the same manner as you would complete the data entry for an enterprise analysis. Only data that is recorded in the spaces shown on the facsimile page will be used in the enterprise analysis. If you record data in spaces that are blank on the facsimile page, they will be ignored at the computer center. Thus it is important that you record data in the correct spaces and that all data needed for analysis are reported properly.

All data should be reported in whole dollars or whole numbers unless the space specifically calls for a decimal number. When a decimal is to be used, the decimal point is printed. In some instances the number of digits to the right of the decimal is indicated by a .x or .xx for one and two decimal places respectively.

For some enterprises the facsimile page will contain special instructions for specific line items. These instructions should be followed carefully. Most data items are self explanatory and do not require special notation. If there is doubt as to how information should be recorded and in turn used in the enterprise analysis, refer to the documentation for the farm business analysis.

#### GENERAL INSTRUCTIONS

##### 1. Enterprise Transfers

Transfers in and transfers out must be recorded very carefully. The total of transfers out for all enterprises must equal the total transfer in's for all enterprises.

##### 2. Product Information

Observe the quantity units very carefully. The computer has been programmed to use only the quantities listed. Check each enterprise carefully to make sure that all products have been reported correctly.

##### 3. Livestock Numbers

Each enterprise facsimile page shows the numbers that will be used in the analysis. It may improve the accuracy of recording data if all of the information from the livestock report FA12 or monthly livestock inventory log is recorded, since the numbers used vary from enterprise to enterprise.

#### 4. Feeds Fed

Record all quantities in natural units of measure (bushels, cwt., tons, pounds). Observe the decimal points very carefully. All numbers must be complete. Ten tons of corn silage must be reported as 10.0 tons. If you record this value as 10 tons, the computer will read only 1.0 tons. Check your work very carefully to avoid error. Some classes of feeds cannot be recorded as fed to certain livestock enterprises. All common grain crops are included in line headings. If a grain crop is fed which has a bushel weight different from any listed, it must be converted to bushels of one of the listed crops.

Pasture days need not be recorded, but the value of pasture is required for the livestock enterprise statements. Whole milk fed and skim milk fed should be recorded in pounds rather than gallons.

#### USE OF PCAF, BCAF & ECAF DESIGNATIONS

Power Cost Allocation Factor. Each enterprise table reports the power and machinery costs allocated to each crop or livestock enterprise. The basic unit for making the allocation is the work unit listed in the master crop list and the master livestock list. Studies have proven that in very typical farm operations where the common agronomic crops are grown and common livestock enterprises are raised under intensive conditions, this procedure works very well. However, on farms where the power and machine use is atypical or where the crop is unusual, the work unit method of allocation is not as effective as it should be. Likewise, livestock enterprises that are not common or are raised under less intensive conditions may require modification of the allocation process by use of the PCAF. The power cost allocation factor is for the purpose of modifying the work unit for use in the allocation process.

Values for the power cost allocation factor (PCAF) can range from 10.00 to .00. Thus a crop of livestock enterprise can be charged with as much as 10 times the power and machine cost as the work unit indicates or as little as none.

Instructors and their clients must decide for each farmer and for each enterprise if the work unit is a good representation of the power and machine cost to be allocated. If they decide that the work unit as defined in the master crops list and master livestock list is appropriate, then the PCAF should be reported as 1.00. If it is not a good allocation factor in comparison to other enterprises grown by that farmer, the PCAF must be either greater or less than 1.00.

Examples of when the PCAF should be less than 1.00 (not all inclusive).

Custom work used to harvest crop. If custom hired was used to harvest the crop, the PCAF should reflect the proportion of the total machine use completed by custom hire. For example, if the farmer determined that custom harvest accounts for 20% of the total machine use on a particular crop, he would report a PCAF of .80.

Reduced Harvest. If normal practice is to take three cuttings of alfalfa, and the farmer only takes 2 cuttings, he may decide that his power and machine cost should be reduced by 10 percent. He would then report a PCAF of .90.

Crop with high labor-low machine inputs. If the farmer grows strawberries, for example, which carries a work unit designation of 35 per acre, he may decide that the acre of berries required only 7 hours of machine time or only 2% of the time designated by the work unit. He then would assign a PCAF of .02 to the strawberries.

Double cropping. When the same land is used to produce two crops in the same year, it is unlikely that the full range of tillage operations would be performed on the second crop. In that event, the PCAF would be reduced to reflect lower costs.

Extensive livestock enterprise. A beef cow herd raised under range conditions may make little use of power and crop machinery. Thus the PCAF may be adjusted downward to reflect less use than would be assigned if the work unit designation were not adjusted by PCAF.

Caution. Reducing the PCAF on selected crops and livestock enterprises will increase the dollars assigned to power and machinery costs to the other crops and livestock. If the PCAF is reduced by the same proportion on all crops and livestock the dollars assigned to power and machinery will be the same as if no modification was made in the work unit. The PCAF should be less than 1.00 only when there is a logical reason for making the reduction and then it should be done only on selected crop and livestock enterprises.

Examples of when the PCAF should be greater than 1.00 (not all inclusive).

Unusual Tillage Practice - Acts of God. When a crop required an unusual tillage operation, for example, replanting due to freezeout or wind damage, the PCAF may be increased to reflect the added expense. If harrowing and seeding were required for the second time, the farmer may decide to increase the power allocation by 15%. Thus the PCAF would be reported as 1.10.

Unusual Tillage - Soil Conditions. If the soil type is unusual so that it requires measurably more tillage than would normally be required, the PCAF should reflect the increased machine use. For example, if the field required 2 additional tillage operations the farmer may choose to record an additional 18% power and machine cost to that crop; thus he would record a PCAF of 1.18.

Additional Harvest. When crop residue is harvested for forage or bedding, the PCAF may be adjusted to reflect a greater power and machine cost than that recorded for crops where residue is not harvested. This factor is important when the value of crop residue harvested is included in the other crop income as a means offsetting the added income.

Livestock. In some instances, a livestock enterprise may utilize an inordinate amount of power and machine expense. In these cases, the PCAF should be adjusted upward. Users should be reminded that livestock work units are assessed only 1/10 - 1/12 the amount of power and machine costs assigned to crop work units.

Caution. Increasing the PCAF on selected crop and livestock enterprises will reduce the dollars assigned to other crops and livestock. Increasing the PCAF proportionately on all crops and livestock to reflect excess machine use on the farm will result in the same power and machinery charges that would have been listed had the PCAF been recorded as 1.00.

BCAF - Building Cost Allocation Factor serves to adjust the allocation of the net costs of owning and operating buildings between the two general categories of "crops" and "livestock" and further to allocate building costs among the livestock enterprises.

BCAF must be assigned on Form 1 to each livestock reported for analysis and to the crop category on Form 3. The values are reported in whole numbers ranging from 0 to 10. BCAF modifies the work unit as an allocation factor. A simple illustration will demonstrate the impact of the BCAF factor and serve to stimulate thought on its proper use.

**Example:**

Net costs of owning and operating buildings, fences and tiling from Table 3 is \$2100.

<u>Enterprises</u>	<u>Total W.U. Assigned</u>	<u>\$ Assignment W/O BCAF</u>
Dairy	100	700
Other Dairy	50	350
Complete Hogs	50	350
Crops	100	700
		<u>\$2100</u>

If the farmer, in assessing his building determined that the hog and crop facilities contributed proportionately more to costs than did the dairy facilities, he may adjust the allocation by using the BCAF factor on a scale of one to ten.

	<u>Values</u>	<u>Dairy</u>	<u>Other Dairy</u>	<u>Hogs</u>	<u>Crops</u>
High	9-10				9
Above Average	7-8			7	
Average	4-6	5			
Below Average	2-3		3		
Low	0-1				

The building costs would now be assigned as follows.

<u>Enterprises</u>	<u>Total W.U.</u>	<u>BCAF</u>	<u>Adjusted W.U.</u>		<u>Cost/Enterprise</u>
Dairy	100	5	500	(1)	552.63
Other Dairy	50	3	150	(2)	165.78
Hogs, Complete	50	7	350	(3)	386.85
Crops	100	9	900	(4)	994.74
			<u>1900</u>		<u>2100.00</u>

$$(1) \frac{500}{1900} \times 2100 = 552.63$$

$$(2) \frac{150}{1900} \times 2100 = 165.78$$

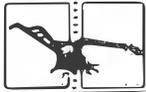

$$(3) \frac{350}{1900} \times 2100 = 386.85$$

$$(4) \frac{900}{1900} \times 2100 = 994.74$$

The BCAF information for completing the data sheets should be taken from the supplementary information form. It must be recorded in whole number only. A BCAF must be assigned to crops.

ECAF. The ECAF allocation process is identical to that used for building costs except that crops are not considered in allocating livestock equipment costs. The same 0-10 scale applies and is determined in the same manner as previously illustrated for building costs.

BCAF and ECAF adjustments are to be recorded in Lines 101-131, Col 7 and 8 and in Lines 151-251, Columns 7 and 8. Failure to record a BCAF or ECAF value will result in no allocation of buildings and equipment costs to livestock. If the column is left blank, a zero will automatically be input at the Computer Center.

THIS COLUMN SHOULD RECORD THE NUMBER OF HEAD THAT SHOULD HAVE BORN YOUNG DURING THE YEAR.

AVERAGE NUMBER OF ADULTS IS COWS ONLY. BULLS AND OTHER ARE RECORDED AS AVERAGE NUMBER OTHER.

SPECIAL INSTRUCTIONS: THESE LINES ARE USED IN THE ANALYSIS TO DETERMINE THE AVERAGE WEIGHTS AND AVERAGE VALUES OF MARKET ANIMALS OR WEANED ANIMALS EITHER SOLD OR TRANSFERRED TO ANOTHER ENTERPRISE; THUS THESE COLUMNS SHOULD EXCLUDE THE SALE OR TRANSFER OF MATURE BREEDING STOCK. LINE 73 SHOULD CONTAIN THE NUMBER OF IMMATURE ANIMALS THAT WERE SOLD OR TRANSFERRED. LINE 74 COL A SHOULD REPORT THE WEIGHT OF THE ANIMALS REPORTED IN LINE 73, LINE 74 COL B SHOULD REPORT THE VALUE OF THE ANIMALS. LINES 73 & 74 ARE A SUBSET OF LINE 25 AND LINE 23, AND ARE USED ONLY IN THE CALCULATION OF SUPPLEMENTARY MANAGEMENT INFORMATION ON THE BEEF BREEDING ENTERPRISE TABLE. IMPORTANT: WEIGHTS AND VALUES RECORDED IN LINE 74 MUST ALSO BE REPORTED AS PART OF EITHER LINE 24 OR LINE 23.

SEE "GENERAL INSTRUCTIONS", FOR USE OF PCAF, BCAF & ECAF DESIGNATIONS.

NO. OF LITTERS WELPED,

MATURE BREEDING BITCHES

SPECIAL INSTRUCTIONS: THESE LINES ARE USED IN THE ANALYSIS TO DETERMINE THE AVERAGE VALUES OF MARKET ANIMALS OR WEANED ANIMALS EITHER SOLD OR TRANSFERRED TO ANOTHER ENTERPRISE; THUS THESE COLUMNS SHOULD EXCLUDE THE SALE OR TRANSFER OF MATURE BREEDING STOCK. LINE 73 SHOULD CONTAIN THE NUMBER OF IMMATURE ANIMALS THAT WERE SOLD OR TRANSFERRED. LINE 74, COL B SHOULD REPORT THE VALUE OF THE ANIMALS. LINES 73 & 74 ARE A SUBSET OF LINE 25 AND LINE 25, AND ARE USED ONLY IN THE CALCULATION OF SUPPLEMENTARY MANAGEMENT INFORMATION. IMPORTANT: WEIGHTS AND VALUES RECORDED IN LINE 74 MUST ALSO BE REPORTED AS PART OF EITHER LINE 24 OR LINE 25.

SEE "GENERAL INSTRUCTIONS", FOR USE OF PCAF, BCAF & ECAF DESIGNATIONS.

THESE LINES ARE USED IN THE ANALYSIS TO DETERMINE THE AVERAGE WEIGHTS AND AVERAGE VALUES OF MARKET ANIMALS OR WEANED ANIMALS EITHER SOLD OR TRANSFERRED TO ANOTHER ENTERPRISE; THUS THESE COLUMNS SHOULD EXCLUDE THE SALE OR TRANSFER OF MATURE BREEDING STOCK. LINE 73 SHOULD CONTAIN THE NUMBER OF IMMATURE ANIMALS THAT WERE SOLD OR TRANSFERRED. LINE 74 COL A SHOULD REPORT THE WEIGHT OF THE ANIMALS REPORTED IN LINE 73; LINE 74 COL B SHOULD REPORT THE VALUE OF THE ANIMALS. LINES 73 & 74 ARE A SUBSET OF LINE 25 AND LINE 25, AND ARE USED ONLY IN THE CALCULATION OF SUPPLEMENTARY MANAGEMENT INFORMATION. IMPORTANT: WEIGHTS AND VALUES RECORDED IN LINE 74 MUST ALSO BE REPORTED AS PART OF EITHER LINE 24 OR LINE 23.

THESE LINES ARE USED IN THE ANALYSIS TO DETERMINE THE AVERAGE WEIGHTS AND AVERAGE VALUES OF MARKET ANIMALS OR WEANED ANIMALS EITHER SOLD OR TRANSFERRED TO ANOTHER ENTERPRISE; THUS THESE COLUMNS SHOULD EXCLUDE THE SALE OR TRANSFER OF MATURE BREEDING STOCK. LINE 73 SHOULD CONTAIN THE NUMBER OF IMMATURE ANIMALS THAT WERE SOLD OR TRANSFERRED, LINE 74 COL A SHOULD REPORT THE WEIGHT OF THE ANIMALS REPORTED IN LINE 73, LINE 74 COL B SHOULD REPORT THE VALUE OF THE ANIMALS. LINE 73 & 74 ARE A SUBSET OF LINE 25 AND LINE 23, AND ARE USED ONLY IN THE CALCULATION OF SUPPLEMENTARY MANAGEMENT INFORMATION. IMPORTANT: WEIGHTS AND VALUES RECORDED IN LINE 74 MUST ALSO BE REPORTED AS PART OF EITHER LINE 24 OR LINE 23.

INSTRUCTIONS - DATA FORM 2

All items on this page are recorded a whole numbers except lines 671, 691, 751 and 761. Marks or numbers which appear in the shaded areas will be ignored at the Computer Center. Any notes which appear in the margins will also be ignored at the Computer Center. In all cases, H.H. and personal share & L.L. share + operators share must equal whole farm.

Line

- Line 11, 21      These items must be recorded even though they have previously been reported on Form One (1) for individual enterprises.
- Line 31            Report directly from the account book.
- Line 41,51,61    These items must be reported even though they will be reported on Form Three (3) for individual crops.
- Line 81, 91,  
101,111          Custom work hired should be assigned to the appropriate category prior to recording.
- Line 121          Report as indicated. Pay particular attention to the household and personal share. It is important that all items be properly recorded.
- Lines 131-181    Report in the categories indicated except when the computerized depreciation schedule is used. When the computerized depreciation schedule is used, adjustments need be made here only for additions to or subtractions from that shown on the final depreciation schedule. The personal share of the auto & truck bought will automatically be retrieved from the computerized schedule. Adjustments must be made to the whole farm and H.H. per share for additions and subtractions not shown on the final schedule.
- Lines 191-241    Report as indicated. If previously reported on computerized schedule, the values will be retrieved directly from the depreciation tapes. Adjustment need be made only for additions and subtractions not shown on the final depreciation schedule.
- Liens 251-401    Report as indicated. Pay particular attention to household and personal share. Landlord cannot have a personal share. If account book shows a personal share for the landlord, it must be subtracted from whole farm and personal share before recording. Line 371 should not include hired labor used exclusively for the custom work enterprise. Report custom work enterprise labor on line 821.

- Lines 411-451 Income from work off the farm should be allocated to the proper category. Income from the custom work enterprise should be reported on Form 3, Line 9001, 9002 only.
- Lines 461-651 Report directly from account book.
- Line 661 Calculate from supplementary information sheet, F.A. 51.
- Line 671 Calculation of adult equivalent is done on F.A. 51.
- Line 681 Report days of day labor hired. This item should not include the days of labor reported for the custom work enterprise.
- Line 691 Report months of monthly labor hired. Do not include monthly labor reported for the custom work enterprise.
- Line 701,711 Report directly from account book. If hired labor for the custom work enterprise was boarded, do not report it here; report as part of custom work labor hired, Line 821.
- Line 721 Report directly from account book.
- Line 731 Value of unpaid family labor per day should be fairly uniform within an analysis area. Report from account book.
- Line 741 Number of operators on farm includes operator and all other partners or operators.
- Line 751 Report actual months available for work (usually 12 but may be less).
- Line 761 Report months worked by other operators listed as part of Line 741.
- Line 771 An estimate must be made of the value of other partners' or operator's labor. Report a uniform value per month within an analysis area for each month reported worked by other operators or partners (line 761).
- Line 781 Check the appropriate tenure arrangement. Check all that apply. Record answer in column titled Record Totals.
- Line 791 Check Yes if a net worth statement should be reported for the farm, No if information is insufficient to compile a reasonable net worth statement.
- Line 861 Report here only operating costs for irrigation. Such costs as electricity or fuel for pumps are appropriate. Report only items that have not been reported in line 61. Other Crop Expense.
- Line 871 Report only irrigation equipment repair that has not been reported under line 321 Repair of Tractor and Crop Machinery.

Line 881           Irrigation equipment bought - From account book, page 42, or if on computerized depreciation schedule, purchased items reported in owner group 8 will be input automatically. Use procedure for additions and subtractions suggested in line 141 - 181.

Line 891           Irrigation equipment sold must be reported here even if reported on computerized depreciation schedule input forms.

Custom Work Enterprise Only:

The custom work enterprise should be used only when the enterprise is a distinct unit kept separate from the general farm account. Items recorded in line 801-851 should not have been previously listed on this page.

Line 801           Gas, oil, grease & other lubricants used exclusively in the custom work enterprises should be reported on this line.

Line 811           Only repairs used exclusively on custom work machinery and equipment should be reported.

Line 821           Only labor to be charged to the custom work enterprise should be reported here. All other labor should be reported on line 371. See line 701-711 for reporting labor boarded.

Line 831           Supplies used exclusively for the custom work enterprise should be reported. Do not report supplies that have been previously reported as part of the general farm expense.

Line 841           Report only the boot price paid. If the item has been reported with the computerized depreciation schedule, owner group 7, report only the subtractions or additions not on the final depreciation schedule.

Line 851           Report the total money received for items sold outright. Do not report the value of trades. If the sale of the item has been reported on the computerized depreciation schedule, owner group 7, report only the subtractions or additions not on the final depreciation schedule.

Submitting Corrections For Form 2

Only line number 11-471 are used to identify the line numbers to be corrected. Line designations 481-851 are for documentation purposes only. For example, if you made a data sheet recording error on irrigation equipment sold, line 891, landlord's share, the correction would be made designating line 381, Column E as the item to be corrected.

## Handling Corporations on Form 2

Corporations require special handling if the return to operators labor and management on Tables 2 and 6 are to be comparable to non-corporate farms.

There are three alternatives you can follow.

### Alternative 1

When recording wages for hired labor, subtract out the wages of one of the incorporators working full-time on the farm. His (her) wages will then become part of the return to operators labor and management (Tables 2 and 6) and will then be comparable to other single operator farms.

### Alternative 2 (Preferred)

Remove all wages and salaries of corporate operators from wages of hired labor. Record the wages of all but one of the corporate operators in Line 771 - value of partner's labor. The wages of the remaining partner will become part of return to operators labor and management. The wages of the other partners (corporate operators) will be used in calculating return to operators labor and management per full time equivalent operator on Table 2.

### Alternative 3

Leave the salaries and wages of all corporate operators in wages for hired labor (line 371). The return to operators labor and management will then show only corporate profit. Farms handled this way should be excluded from the averages. Farms handled this way will not be comparable to non-corporate farms when examining return to family labor and management on Tables 2 and 6 or in examining return to capital and family labor on Table 6.

## INSTRUCTIONS - DATA FORM 3

### General Instructions

The 1976 revision of the crop data sheet allows for the selection of 24 crops from a master list of about 900 irrigated and dryland crops. Any farm may have up to but not more than 24 separate crops reported in Table 10 - crop enterprise analysis. Analysis tables will not be printed for the five land use categories that are pre-printed on the data form.

To properly understand the instructions for completing this data form, it is first necessary to become familiar with format used in Table 10 - crop enterprise of the farm business analysis.

Instructions for this form are given by column designation and line segment only.

Line 1 - Crop Code No.: Crop code numbers are obtained by reference to the Dryland section of the crops master list. Select the crop code number that best describes the crop without regard to whether or not the crop has been irrigated. Coordinators will probably decide before the analysis season begins which of the crops they may choose to represent the crops grown in their area.

While there are many crop choices available for each farm, the selection of crop codes should be based on the way in which income and expense have been identified in the client's account book. CAUTION: A crop code number may be used only once on each farm. If a farmer grows the same crop under both dryland and irrigated conditions, different code numbers must be selected to report each crop.

### Specific Column Instructions

Crop Description: This item is entered for reference only. Abbreviations

### SUMMARY

Before submitting data sheets to the computer center, be sure you check them carefully. More than 90% of the errors that occur in the analysis result from incorrect data entry.

1. Have you made the necessary cross check to insure that the account book has been closed properly?
2. Did you review last year's reports to refresh your memory of where you made errors?
3. Is everything recorded on the right line and in the correct column?
4. Are all the numbers in the correct form -- whole -- one decimal -- two decimals -- as the instructions indicate?
5. Have you made a carbon or machine copy of the data sheets so you can check the analysis reports for accuracy when they are returned?
6. Have you devised a system of keeping track of the analysis you have submitted so you know where each report is and when it was submitted for computation?

If you answered No to any of these questions, it will be worth your while to review your analysis procedure before submitting the data sheets to the computer center.
