FINANCIAL STATUS OF BEGINNING FARMERS

FINANCIAL STATUS OF BEGINNING FARMERS IN MINNESOTA

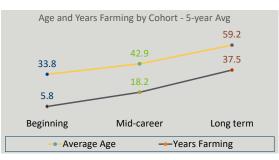

Farming has always been a challenge when you consider weather, livestock production, markets and financial risks. Beginning farmers tend to have additional challenges compared to more experienced farmers. This document is designed to highlight the financial status of beginning farmers as they navigate

through the pressures of operating and growing their farm business while competing with farmers having many more years of experience. This report will show that Beginning Farmers, compared to experienced farmers, have an elevated vulnerability to the conditions above.

DEMOGRAPHICS

Data was provided by MN farmers who participated in the Minnesota State Farm Business Management (FBM) Education program. This report highlights three different farm cohorts from the 2024 MN FBM State Database. The first cohort is the beginning farmers, defined as those with less than 10 years of farming experience. There were 648 farms in this cohort. The second cohort is the midcareer farmers, with 11-30 years of farming experience, totaling 718 farms. The final cohort is the long-term farmers with greater than

30 years of farming experience, including

experience, including 832 farms. These charts illustrate that the Beginning Farmer cohort represents a relatively similar type of farm compared to the mid-

represents a relatively similar type of farm compared to the midcareer and long-term farms when comparing sources of income. As expected, the beginning farmer cohort is younger in age and therefore has significantly fewer years of experience.

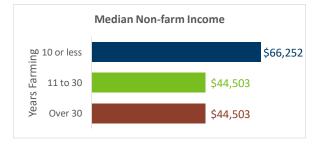

5-year Average (2020 - 2024)	Beginning	Mid-career	Long Term
5-year Average (2020 - 2024)	Farmer	Farmer	Farmer
	10 or less	11 to 30	Over 30
	years farming	years farming	years farming
Income Statement			
Gross cash farm income	\$455,717	\$1,074,028	\$1,345,973
Total cash farm expense	\$380,021	\$893,617	\$1,102,379
Average net farm income *	\$102,650	\$197,567	\$225,451
Median net farm income *	\$54,536	\$105,105	\$122,556
Liquidity			
Working Capital	\$185,467	\$413,225	\$584,543
Working Capital as % GFI **	36.9%	36.2%	41.9%
Working Capital as % Op Ex	52.1%	49.4%	56.3%
Profitability (cost)			
Rate of return on assets	8.4%	7.0%	5.7%
Rate of return on equity	14.0%	9.5%	6.6%
Solvency (yearend at market)			
Total assets	\$1,483,470	\$3,552,837	\$5,253,078
Total liabilities	\$673,551	\$1,296,766	\$1,385,074
Net worth	\$809,919	\$2,256,071	\$3,868,005
Total Debt to Asset Ratio	45%	36%	26%
Replacement Capacity			
Debt Coverage Ratio	2.58	2.09	2.08
Term Debt Coverage Ratio ***	2.74	2.21	2.21
Efficiency			
Operating Expense Ratio	70.8%	73.3%	74.4%

Machinery Value/Crop Acre	\$535	\$739	\$933
Average Land Rent/Acre	\$191	\$187	\$207
Percent Crop Acres Owned	15%	21%	30%

COMPARING THE 5-YEAR AVERAGES

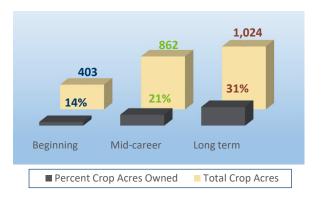

The 5-year average data provides a look at the financial status of each cohort. This provides a view of the ability of the farm business to withstand economic downturns. This table shows that beginning farmers have significantly lower levels of average and median net farm income^{*}, suggesting more challenges in economic downturns on the farm.

Working capital as a % of gross farm income^{**} is a financial metric that shows the amount of support available to a farm when faced with increased financial stress. This chart shows the reduced level of working capital and working capital as a % of gross farm income for beginning farmers. When that number is below 30%, there is concern about having enough liquidity to meet all financial obligations in cases of depressed commodity prices or decreased farm production. On average, the beginning farmers have a higher term debt coverage ratio***. This ratio illustrates the farms' ability to make term debt payments. Noting their reduced net farm income, this suggests that the level of term debt is less for beginning farmers and more non-farm income may be required to support debt payments.

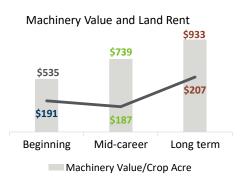

On average, beginning farmers are more reliant on non-farm income to cover family living and non-farm investments compared to both the mid-career and long-term farms. While the higher non-farm income can help beginning farmers in establishing their farms, it can result in less time available for managing and operating their farms. This requires the beginning farmers to be acute time managers as well.

In reviewing the crop related information, beginning farmers have much smaller operations, in terms of total crop acres, compared to mid-career and long-term farms. Owning fewer acres reduces the equity they have to acquire more land at the same rate as their counterparts. Beginning farmers have lower machinery value per acre, suggesting there is less machinery

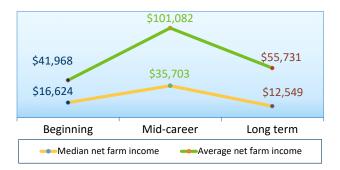

owned and more machinery borrowed, or custom hired. The average land rent per acre for beginning farmers is higher than the mid-

career farmers, which may or may not be influenced by geographic differences. Beginning farms must compete on virtually equal grounds with more established farmers while they build both their land base and equity over time. This suggests that special programs like tax credits and scholarships are essential in supporting beginning farmers as they master farm business management skills.

2024 FINANCIALS AT-A-GLANCE

2024 was a not strong year for production agriculture for beginning farmers, where the average net farm income dropped to \$41,968 and the median net farm income was \$16,624. This table highlights a few selected financial factors for 2024. Beginning farmers have a smaller gross cash farm income, as well as a smaller average net farm income (as shown in the chart) compared to the other two cohorts. This demonstrates that time is required to establish a farm business that will generate the net farm income necessary to fully support the farmer and his/her family.

	Beginning	Mid-career	Long Term	
2024	Farmer	Farmer	Farmer	
	10 or less	11 to 30	Over 30	
	years farming	years farming	years farming	
Gross cash farm income	\$440,981	\$1,143,200	\$1,431,953	
Average net farm income	\$41,968	\$101,082	\$55,731	
Median net farm income	\$16,624	\$35,703	\$12,549	
Rate of return on assets	3.1%	3.1%	1.0%	
Rate of return on equity	1.5%	1.8%	-1.5%	
Net worth	\$880,622	\$2,581,421	\$4,370,675	
Total Debt to Asset Ratio	45%	36%	27%	
Operating Expense Ratio	79.0%	79.9%	84.1%	

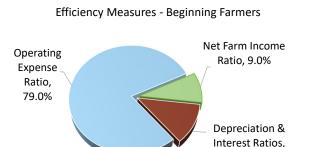

The beginning farmers show a similar rate of return on assets to the mid-career farmer, as shown on the table above. Beginning farmers have a lower net farm income and their total assets are much lower than the other groups, which results in beginning farmers typically having a stronger rate of return. Historically, when farmers are challenged financially, they have utilized equity in the business to refinance or support their financial position. This continues to be more difficult for beginning farmers, because they carry a significantly higher total debt to asset ratio, as shown in the chart. The chart also shows the significant difference in the amount of net worth (equity) for the Beginning Farmer versus the more experienced farmers.

Operating expense ratio is important because it shows the percentage of farm income needed to pay the costs of operating the farm, such as: seed, feed, fertilizer, chemicals, land rent, etc. A lower operating **Net worth** —Total Debt to Asset Ratio expense ratio indicates more income is available to cover additional

12.0%

farm expenses like interest and depreciation. In 2024, beginning farmers show lower operating expense ratios compared to the other two cohorts. Beginning farmers are often assisted by family members or others

through machinery and building usage/sharing. This support can be seen in the difference in operating expense ratio and net farm income ratio between the cohorts. Combined with the depreciation and interest ratios, the four ratios total 100% of business activity. The higher net farm income ratio for beginning farmers suggests reduced cost of machinery ownership which is also evident by lower depreciation expense. However, the beginning farmer cohort had a higher interest expense ratio in 2024 compared to the other two cohorts suggesting higher borrowing needs for that cohort.

A 5-YEAR TREND (2020-2024)

Farm profits vary from year to year for numerous reasons and farmers need a solid business plan and a strong financial foundation to endure significant swings in net farm income. Beginning farmers need time as well as accurate and comprehensive data for decision making to build that foundation.

189 beginning farmers have been continuously

enrolled in the FBM program over the last five years. The table on the right shows selected financial factors that illustrate a trend related to business size and growth over time. The data shows that these beginning farmers maintained stable growth in gross cash farm income, total assets, net worth, and crop acres.

Previous data recognized the financial challenges and vulnerabilities that exist as beginning farmers build their business. This trend data recognizes the opportunity for growth that can occur with sound decision making and the use of a financial business analysis. The FBM program provides education and financial tools to help farmers recognize key aspects of their own farm to help guide business growth, evaluate financial concerns impacting the business, and identify opportunities that the individual farmer may/may not decide to act upon.

Beginning Farmers enrolled in FBM all five years								
Cohort = 189 Farms	2020	2021	2022	2023	2024
